

VPCK product pump

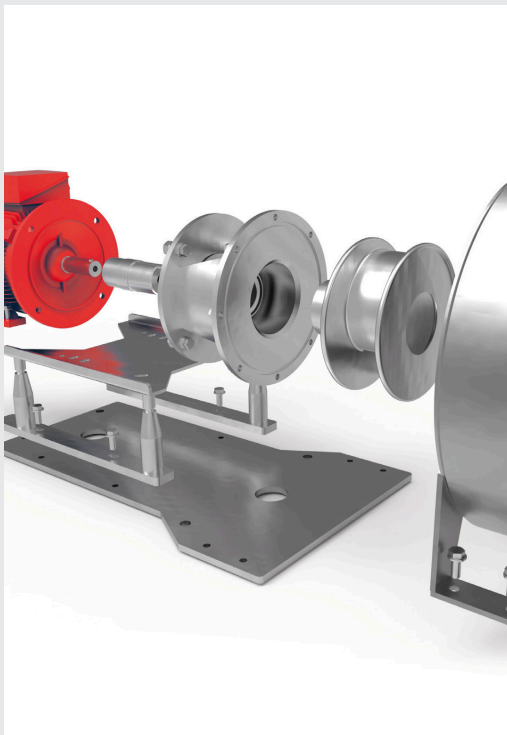

*Discover
Kiremko Quality*

The VPCK product pump is known for its performance, efficiency and reliability. This innovative pump will add value to your production process. The VPCK pump is efficient in pumping many potato products of different sizes with a minimum of product damage. All contact parts with the product are made of stainless steel, which makes the pump hygienic and reliable.

Fast and efficient

The VPCK is perfectly designed for pumping products in a fast and efficient way. The sturdy enlarged pump housing and the optimized cast stainless steel impeller ensure an even speed and superior product handling. Due to the smart configuration the pump is easy to use and the chance of blockage is minimized, which can decrease downtime and maintenance costs.

The VPCK is efficient and reliable and will add value to your production process.

Clean and sustainable

The pump is executed in high-quality stainless steel and the electric motor has an epoxy coating with an optional stainless steel cover. The use of stainless steel inside the pump means it is hygienic and easy to clean. It also makes the pump maintenance free. The VPCK is available in four types with a horizontal or vertical discharge. The installation dimensions are identical to the predecessor VDKK, which makes these pumps easily interchangeable.

Executed in high-quality and hard wearing materials, hygienic and maintenance free.
