

Piston pump

*Discover
Kiremko Quality*

Specifically for removing potato peel waste or mash from the production process used for animal feed etc., Kiremko has developed the piston pump. An unrivalled pump that is maintenance-free, can handle high pressures, and has a robust stainless steel pump housing and piston.

Reliable and effective

The Kiremko piston pump, designed by our own engineers, offers optimum reliability. The stainless steel pump can run dry and has a capacity of more than 3.5 m³ an hour with a maximum working pressure of 14 bar. This pump works on compressed air and is available in a 200 mm diameter version.

A 100% operational pump that works continuously, even if the process is halted for a while.

Powerful and maintenance-free

This pump offers fantastic power and is maintenance-free. It is obvious: where other pump techniques require a lot of maintenance or have limited capacity, this pump will actually strengthen your production process.

Strengthens your production process and is maintenance-free.

Hygienic and durable

Stainless steel was chosen because it offers reliability, robustness and convenience. This piston pump is easy to clean and will enable you to save time and money. Also, thanks to its durable construction, this pump will operate problem free for many years.
