

Handling

Dewatering vibrator

The Kiremko dewatering vibrator transfers your product from one process on to the next. Meanwhile, the vibration suited to your product ensures dewatering of your product. Several aspects affect the successful drainage of the water; the surface and the inclination of the screen plate, the vibration frequency and characteristics of your product. In all cases our dewatering vibrator can be manufactured to your specific requirements to provide the desired result.

Food Processing Equipment

*About 15% of the costs of your
production line consists of vibrators.
Then you should better choose the best.*

Flexible and stable

The dewatering vibrator is suitable for your product to transport, to divide, or to (have) inspect(ed), over a maximum width of 1.90 meters. The inclination and perforation of the screen plate can be customized for each product. Our Fastfit- clamp system allows you to quickly and easily change the screen plates.

*We choose the most interference-free
approach; direct drive.*

Direct and customized

Our directly driven vibrators provide interference-free and quiet transport and dewatering of your product. The unbalanced motors provide exactly the correct way of moving (transport), shaking (dewatering) or raising (loosening) the product. Each application requires a custom engineered solution, specifically for your production line.

Practical and cost-effective

Vibrators generally provide a heavy mechanical load. Therefore, the optimal frequency and motor capacity are important for an interference-free operation. Vibrators form an integral part of the effectiveness of the process line. They are the mortar between the bricks of your success. You can build on the Kiremko dewatering vibrator.

*Our vibrators form the
effectiveness of your
production line.*
